Summary

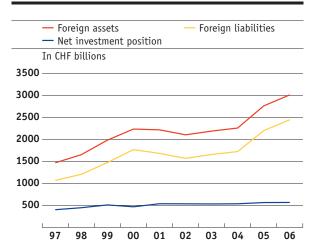

In 2006, foreign assets and foreign liabilities increased by approximately CHF 250 billion each, reaching CHF 3,015 billion and CHF 2,449 billion. At CHF 567 billion, the net investment position was almost the same level as in the previous year.

Changes in the net investment position were dominated by three factors: the financial account (high level of capital outflows and inflows), loss in value of the US dollar and price gains on shares. Capital outflows exceeded capital inflows by CHF 88 billion. The weaker dollar mainly affected foreign assets, one-third of which were denominated in US dollars. The US dollar accounted for only 20% of the foreign liabilities. By contrast, price gains on shares had a stronger impact on foreign liabilities than on foreign assets: While foreign investors in Switzerland held just under one-third of their assets in shares, a mere 10% of Swiss investors' foreign assets were held in shares. Consequently, on balance, valuation changes in shares and foreign currency items led to a net decline in the net investment position.

Valuation changes have also had a negative effect on the net investment positions in previous years. Consequently, in spite of considerable net capital outflows, the net investment position has only seen a minimal rise since 2001. A special topic on page 11 gives more detailed information on the role of exchange rates and share prices in this development.

Investment in structured products as well as the positive and negative replacement values of derivatives are included in this publication for the first time. In the case of foreign assets, these holdings amounted to CHF 114 billion (CHF +34 billion), while the share of foreign liabilities was CHF 71 billion (CHF +11 billion).

Other changes	77.8	43.3	34.4
Total at the end of 2006	3 015.2	2 448.7	566.5

¹ Investment in accordance with the financial account in the balance of payments; capital outflows result in an increase in foreign assets and capital inflows in an increase in foreign liabilities.

Foreign assets

Foreign assets comprise direct investment, portfolio investment, derivatives and structured products, reserve assets, as well as other foreign assets. Overall, they increased by CHF 250 billion to CHF 3,015 billion. This increase was largely due to capital outflows. At the same time, US dollar holdings registered valuation losses. The US dollar weakened by 7% year-on-year.

Direct investment abroad rose from CHF 563 billion to CHF 632 billion. Brisk investment activity by Swiss companies abroad, in particular, contributed to this development. The share of direct investment in total foreign assets rose by one percentage point to 21%.

Portfolio investment abroad advanced from CHF 958 billion to CHF 1,075 billion. The increase in debt securities was attributable to the acquisition of securities, while the higher level of equity securities was primarily the result of rising share prices in Europe. The share of portfolio investment in total foreign assets increased by one percentage point to 36%.

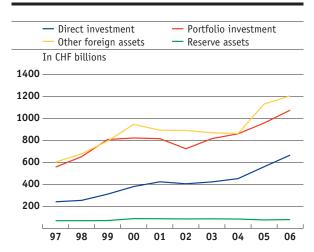

For the first time, derivatives and structured products are included in the international investment position. On the one hand, the new item shows investments by domestic investors in structured products of foreign issuers and, on the other hand, it shows the replacement values of derivatives with counterparties abroad. While the positive replacement values of derivatives increased from CHF 32 billion to CHF 46 billion, holdings of structured products advanced by CHF 48 billion to CHF 67 billion. The proportion of derivatives and structured products in total foreign assets rose by one percentage point to 4%.

Other foreign assets increased from CHF 1,088 billion to CHF 1,116 billion. This position consists mainly of domestic banks' balances with banks

abroad. Due to exchange rate fluctuations, these interbank balances receded by CHF 18 billion. Balances with customers abroad, by contrast, were CHF 13 billion higher. The level of fiduciary investments increased by CHF 24 billion to CHF 108 billion. Fiduciary investments take the form of short-term investments in the money market abroad. The share of other foreign assets in total foreign assets dropped by three percentage points to 37%.

The National Bank's reserve assets increased by CHF 3 billion to CHF 79 billion. This increase was almost entirely attributable to valuation gains on gold holdings. The share of reserve assets in foreign assets remained unchanged at 3%.

Graph 2 Switzerland's foreign assets

Other foreign assets include derivatives and structured products as well as other assets.

Foreign liabilities

Liabilities comprise foreign direct investment in Switzerland, stocks of Swiss securities held by non-residents (portfolio investment), derivatives and structured products and other foreign liabilities. They increased by CHF 248 billion to CHF 2,449 billion.

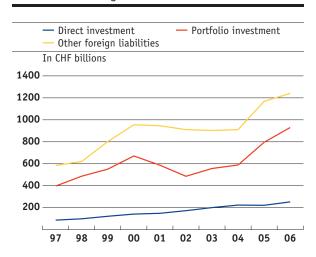

Portfolio investment rose by CHF 139 billion to CHF 930 billion. Equity securities, which were up by CHF 130 billion to CHF 835 billion, accounted for the bulk of the increase. Rallying share prices in Switzerland (SPI +18%) were instrumental in this development, while share purchases played only a minor role. Securities accounted for 38% of total foreign liabilities compared with 36% a year earlier.

The stock of foreign direct investment in Switzerland climbed by CHF 42 billion to CHF 266 billion. This was mainly attributable to capital inflows. The share of direct investment in total foreign liabilities mounted by one percentage point to 11%.

The new 'derivatives and structured products' item shows investments by foreign investors in structured products of domestic issuers as well as the negative replacement values of derivatives with counterparties abroad. Investment in structured products climbed from CHF 17 billion to CHF 29 billion. The negative replacement values of derivatives decreased by CHF 1 billion to CHF 42 billion. The share of derivatives and structured products in foreign liabilities remained unchanged at 3%.

Other foreign liabilities largely consist of banks' liabilities towards banks abroad. Other foreign liabilities rose from CHF 1,125 billion to CHF 1,182 billion. Their share dropped from 51% to 48%.

Breakdown of foreign assets and liabilities by currency

Movements in exchange rates led to valuation losses on US dollar holdings (-7%) and valuation gains on euro holdings (+3%).

84% of foreign assets were held in foreign currency compared with 85% in the previous year. The share of US dollar investments fell from from 35% to 33% in favour of the Swiss franc and the euro.

The Swiss franc share of foreign liabilities advanced from 55% to 57%. The proportion of US-dollar investments fell from 25% to 21% in favour of the Swiss franc and the euro. The share of the euro investments increased from 14% to 15%.

Special topic:

The impact of valuation changes on the international investment position since 2001

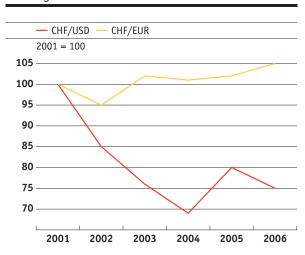

Foreign assets and liabilities have seen significant growth since 2001. Between 2001 and 2006, foreign assets surged by CHF 796 billion to CHF 3,015 billion, while foreign liabilities climbed by CHF 767 billion to CHF 2,449 billion during the same period. As a result, the net international investment position rose by CHF 29 billion to CHF 567 billion. During the same period, capital outflows came to CHF 715 billion and capital inflows to CHF 392 billion. Swiss net outflows of capital amounted to CHF 323 billion. In comparing the high level of capital outflows of CHF 323 billion with the increase in the net investment position of CHF 29 billion, it becomes apparent that net capital outflows only accounted for a small proportion of the rise in the net investment position (graph 6). The following section describes the impact of valuation changes on this trend. Changes in the exchange rate and share prices are the main contributing factors.

Table 4 shows the breakdown by currency of the international investment position. Between 2001 and 2006, the share of foreign currency in foreign assets averaged 85%. The corresponding proportion in foreign liabilities came to 46%. As a result of the different weighting, changes in the exchange rate affect foreign assets and foreign liabilities disproportionally: when foreign currencies drop in value, this has a bigger impact on foreign assets than on foreign liabilities. Graph 7 shows that the US dollar was weak between 2001 and 2006. This had a particularly negative effect on the net investment position.

Graph 6

EUR	30	14
Other currencies	22	8
Total	100	100

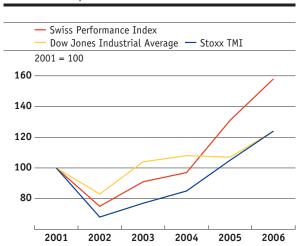

Table 5 shows the proportion of portfolio investment in foreign assets and liabilities. At the end of 2006, shares accounted for 9% of foreign assets. They accounted for 30% of foreign liabilities. Since the end of 2001, share prices have risen sharply both in Switzerland and abroad. Since shares account for a smaller share of foreign assets than of foreign liabilities, an identical price rise in foreign and domestic shares will result in a smaller increase in foreign assets than in foreign liabilities. Since 2001, this trend has been magnified because share prices abroad – in particular in Europe and in the US – have risen only half as sharply as those in Switzerland (cf. graph 8).

Table 6 shows what impact these factors had on foreign assets and liabilities as well as on the net investment position. Information on the financial account is derived from the balance of payments. Valuation changes were estimated on the basis of changes in the exchange rate and share prices. Representative indices were used to estimate the influence of share prices. Other changes reflect adjustments in the reporting population (inclusion of new companies in the survey), inclusion of financial instruments not previously covered as well as inexplicable changes.

Between 2001 and 2006, cumulated valuation changes had a negative effect on foreign assets. As against share price gains of CHF 142 billion, exchange rate losses of CHF 255 billion were recorded. At CHF 203 billion, exchange rate losses were particularly heavy in 2002 due to the weaker

US dollar and euro. In the case of foreign liabilities, however, valuation changes of CHF 129 billion had a positive effect on holdings. While cumulated exchange rate losses amounted to CHF 117, share price gains totalled CHF 245 billion. Both exchange rate losses on foreign assets and share price gains on foreign liabilities had a negative impact on the net investment position. These losses and gains also explain why the net investment position between 2001 and 2006 has only seen a slight increase.

Changes from the previous year

Derivatives and structured products

As of 2005, derivatives and structured products are being shown as additional components in the international investment position, based on new data sources. The derivatives item contains replacement values for outstanding derivatives held by banks and insurance companies. Derivatives held by other industries will be available as of 2008. Holdings of bank customers are reported under structured products.

Statistical basis

Direct investment

Swiss direct investment abroad: Swiss participations of no less than 10% in companies abroad (subsidiaries, branch offices), as well as intragroup lending.

Foreign direct investment in Switzerland: Foreign participations of no less than 10% in companies in Switzerland (subsidiaries, branch offices), as well as intragroup lending.

The statistics are based on data submitted to the Swiss National Bank by banks and companies.

Portfolio investment

Swiss portfolio investment abroad: Investment by residents in securities issued by foreign borrowers which are not included in direct investment or reserve assets, such as debt securities (money market instruments, bonds), equity securities (shares, participation certificates, dividend-right certificates), and investment fund certificates from foreign investment funds.

Foreign portfolio investment in Switzerland: Foreign investment in securities issued by domestic borrowers which are not included in direct investment, such as debt securities (money market instruments, bonds, medium-term bank-issued notes), equity securities (shares, participation certificates, dividend-right certificates), and investment fund certificates.

The statistics are based on data submitted to the SNB by banks and companies.

Derivatives and structured products

Derivatives include unconditional forward transactions (forwards, futures, swaps) and conditional forward transactions (options). Derivatives abroad: Positive replacement values of outstanding derivative financial instruments with counterparties abroad. Derivatives in Switzerland: Negative replacement values of outstanding derivative financial instruments with counterparties abroad. The statistics are based on data submitted by banks and insurance companies to the SNB.

Structured products are standardised debt certificates that combine the properties of two or more financial instruments, thus forming a new investment product. A wide variety of structured products are available on the market. A commonly used breakdown divides structured products into participation products (certificates), yield-optimisation products (certificates, convertibles) and capital-protected products (with or without cap). Structured finance products (asset-backed securities, collateralised debt obligations and similar products), for which the financing purpose or risk transfer is of central importance, are classified as debt securities rather than structured products. Investment abroad: investment by Swiss residents in structured products of foreign issuers. Investment in Switzerland: investment by non-residents in structured products of domestic issuers. Holdings in bank custody accounts are reported. The statistics are based on data submitted by the banks to the SNB.

Other investment

Lending by the SNB: Claims abroad: Claims from repo transactions, monetary assistance loans.

Bank lending: Claims abroad: Lending to banks and customers abroad. Liabilities abroad: Deposits of banks and customers abroad.

Private sector lending: Claims abroad: Lending abroad by companies, investment funds and pension funds in Switzerland, excluding intragroup lending which is recorded with direct investment abroad. Liabilities abroad: Lending from abroad to companies in Switzerland, excluding intragroup lending which is recorded with direct investment in Switzerland.

Public sector lending: Claims abroad: Lending abroad by the public sector. Liabilities abroad: short-term liabilities of the public sector towards other countries.

Other: Claims abroad: Residents' fiduciary funds which are invested abroad. The Swiss Confederation's participation in international organisations, the SNB's participation in the Bank for International Settlements (BIS). Non-bank balances at banks abroad. Real estate held abroad by investment funds and pension funds. Liabilities abroad: Banknotes in Swiss francs held by non-residents. Non-residents' fiduciary funds which are invested in Switzerland. Real estate in Switzerland owned by non-residents.

The statistics are based on data submitted to the SNB by the Swiss Confederation, banks, companies and the BIS.

Reserve assets

Gold holdings, foreign exchange holdings, the reserve position in the International Monetary Fund and international payment instruments (SDRs) held by the SNB.

Methodological basis

Definition

The international investment position indicates the level of Switzerland's financial assets and liabilities. The net investment position denotes the balance of these assets and liabilities. The international investment position comprises portfolio investment, direct investment stocks, the SNB's reserve assets, as well as other financial assets and liabilities.

Switzerland's international investment position is compiled in accordance with IMF guidelines (Balance of Payments Manual, 5th edition).

Valuation of stocks

The positions at the end of the year are generally stated at market prices. Direct investment positions are an exception, as they are shown at book value.

International investment position and balance of payments

The international investment position is closely related to the balance of payments. It reflects the level of foreign assets and liabilities at a given point in time. In the balance of payments, capital flows (investments) are shown during a specified period. Capital outflows (Swiss investment abroad) lead to an increase in foreign assets, while capital inflows (foreign investment in Switzerland) bring about an increase in foreign liabilities. If Switzerland makes more investments abroad than vice versa, i.e. if its transactions result in a net capital outflow, the net international investment position increases. In this case, the corresponding balance in the current account shows a surplus.

However, changes in the international investment position are determined not only by investment, but by other factors as well. In particular, the positions reflect fluctuations in exchange rates and precious metal prices, as well as changes in stock prices.

Legal basis

According to the Federal Act on the Swiss National Bank of 3 October 2003 (National Bank Act) and the Implementing Ordinance on the National Bank Act of 18 March 2004 (National Bank Ordinance), the Swiss National Bank is authorised to collect the statistical data required for drawing up the balance of payments as well as the statistics

on the international investment position. Pursuant to the Appendix to the Implementing Ordinance on the National Bank Act, legal entities and companies are obliged to supply information if their financial claims or liabilities abroad exceed CHF 10 million at the time of the survey or if their direct investment abroad or direct investment from abroad exceed CHF 10 million at the time of the survey.

Explanation of symbols

. Figure unknown, confidential, meaningless, no longer reported or no reporting institutions (missing value).

Rounding differences

Deviations between the totals and the sums of components are due to rounding.

Revision procedure

Annual revisions are conducted in connection with the publication of the report on the international investment position in December. When the provisional data for the year are published in December, the figures for the previous year are generally revised. For these revisions, information supplied after the deadline and new data from secondary sources are taken into account; provisional estimates are revised or replaced. If the new information relates to periods dating even further back, the older figures are also revised. Methodological modifications, new classifications, new sources – also for periods dating further back – are discussed in the explanatory notes of the report in question.

¹ Expansion of the reporting population in 2004.

² Expansion of the reporting population in 2004.

³ Intragroup lending is shown under direct investment.

² Included in portfolio investment by the other sectors.

³ Including portfolio investment by banks.

⁴ Intragroup lending is shown under direct investment.

Other SNB publications on the international investment position

The Swiss National Bank publishes quarterly data on the international investment position in the Monthly Statistical Bulletin (R tables). The online version of the Monthly Statistical Bulletin also provides access to long time series. Data is available on an annual basis from 1985, and on a quarterly basis from 2000.
